BCONNECT APPLICATION 1.0

1. PROBLEM: A trust issue exists between online buyers and sellers when it comes to payments and delivery of products. This problem was not there from the beginning of online shopping when people believe in pay before delivery. The payment before delivery help sellers understand how serious buyers are and they need to deliver the product since all payments have been made by the buyer, until a certain point when fake sellers emerged such that after buyers made payments stories upon stories over scam. This slows down the rate of online transactions. Also the above gave rise to PAYMENT ON DELIVERY, now the problem of unserious buyers emerged where the seller delivers products but buyer has no money or lost interest or whatever be their reasons and therefore not reachable. These problems has totally or partially influenced the rate in which people can get what they want or need when they see it online. This problem shall give rise to BCONNECT APPLICATION.

2. SOLUTION: Recall that the same problem is similar to what gave rise to Crypto P2P on Binance, Bybit etc and today it has solved up to 90% fraud cases or more. We are applying the same solution to products in Nigeria. The application will allow buyers and sellers create accounts to carry out the following process:-

   (a). Seller Creates Order: Buyers and Sellers discuss and agree price and product features on whatever social media application or contact they meet, the seller create order on the BCONNECT Application with exact amount agreed.

   (b). Buyer Makes Payment: Buyer shall deposit the agreed and specify amount into account details provided by the Application or however means but ensure funds leaves buyers bank or possession to a medium where can BCONNECT decide if the money goes to the buyer or Seller pending when agreement is reached.

   (c). Products Waybill: Product leaves sellers possession to buyers destination in a given date so that the buyer receives the product and Confirms in the Application by means of code or whatever which will now approve the money to be released to the sellers bank.

NB: Money shall go back to the buyer if product fails to reach buyers destination within the agreed date or if buyers confirms fake product or substandard products on what he/she was shown online.

APPLICATION OBJECTIVES

1. Enable online sellers gain trusts without a physical shop or presence

2. Eradicate completely the fear of being scammed by sellers and the fear of shipping a

product and buyer becomes unavailable

3. Enables distance transactions between two unknown individuals as buyers and sellers
4. To put an end to the popular saying "WHAT I ORDERED VS WHAT I GOT".

APPLICATION INTERFACE/FEATURES

This Application should act as a local escrow that contains user registration and data storage including the following:-

(i). It should be able to accept payment and hold/lock it within the period when the seller shall deliver product to buyers destination.

(ii). It should accept verified Sellers difference with positive and negative rating or reviews.

(iii). It should be able to store advert of orders created by sellers so as to make it easier for them to share order link to new buyers on the same product but should allow order creator to determine quantity.

(iv). Product refunded due to buyers negligence should be charged (such as none availability or none reachable to receiving product) While product refund due to sellers negligence incurred no charges but buyer get full refund while seller takes care of logistics To and fro.

(v). There should always be an interface where a registered or unregistered users are ask if he/she want to BUY/SELL.

(vi). Consider Application where both Buyer and Seller can create order and share link and once the other party reviews and approves, order link will be locked out so that new customers won't see that same order unless it has more quality available (i.e once it is approved to be in progress by the other party, order/link becomes unavailable).

(vii). Let buyer also create a deal/order advert so that any available seller can indicate interest.

(viii). Seller should be able to indicate he has sent out product by updating the status.

(ix). Application should be able to send pop-up notifications to show individuals seller/buyer their transaction updates/progress.

(x). Order creator should ser price, delivery timeline, terms and conditions plus free space for instructions while system decide and add commissions for both buyer and seller.

(xi). App should have list of deals such as product/service Name, etc (eg Phone,

Generator, wigs etc) and should also allow creator to make new product/serivce Name in case where their desire product or service is not on the list.

(xii). App should always allow users to upload proofs such as photos, videos receipts etc.

(xiii). Add a checkbox for the Escrow T&C before buyer Makes Payment

(xiv). Delivery code system

(xv). Referral System, customized Referral code with NGN500 rewards once the referred person complete one order successfully

MONEY FLOWS: Buyer pays first into the App escrow wallet. Money shows as locked. Seller can see it but can't withdraw, buyer clicks the I HAVE PAID button to update the status and also upload proofs(also better if system detects payment and updated status automatically), Seller sent out the Waybill and upload receipt and click the I HAVE SENT WAYBILL button, then after the duration the buyer shall receive WAYBILL and clicks the I HAVE RECEIVED PRODUCT button, then money shall automatically go to the seller within 1hr or 2hr after the buyer fails to raise dispute.

IN-APP-CHAT: cannot delete (Evidence for dispute) this chat may have call button, dispute button, I didn't get items, fake items, what I ordered is not what I got etc, upload dispute Evidence, product to be sent out, vote for admin to intervene etc.

ADMIN DASHBOARD (CONTROL PANEL)

1. See all transactions live, pending, locked, released, disputed, completed etc
2. User management: Ban, Verify, Freeze etc
3. Dispute center: Chat history, Evidence, decides who wins dispute etc
4. Commission settings: set commissions per deal, percentage category etc
5. Escrow wallet balance: total money held(from bank partners).
6. Withdrawal approvals for Sellers or earners
7. Push notifications or email composing box to all users
8. Referral system: invite and earn with a customizable referral code system.

SELLER/MERCHANT FEATURES (To build trust)

a. Storefront: Tunde gadget (ie sellers name), 248 deals completed, 90% positive rating, 10% negative ratings, see reviews comment below.

b. Reviews and rating after each deal

c. Badge System: Verified, Top seller, fast shipper etc

d. Seller Creates deals and share to buyer, Buyer clicks link and come over to the deals inside the App to get payment details and pay.

e. If seller scams and runs, system refund buyer his paid amount.

SECURITY

(1). End-to-End chat encryption

(2). All money locked in trust account

(3). Auto-flag: same device with 2 account, VPN, High risk deals.

(4). Transaction limit: New users maximum deal amount N500,000, Online verified users without physical shop maximum deal amount N5,000,000, and Verified Users with physical shop is unlimited.

WHAT I SHOULD RECEIVE SHOULD INCLUDE:

1. WebApp
2. Mobile App for Android, published on the Google Play STORE
